

ALASKA

WATER SOFTENERS

PURITY, SIMPLICITY, SERENITY

Stylish and exclusive

Advanced, efficient and quiet

High Capacity for the larger house, office or pub

Efficient, very low regeneration water usage

AN ALASKA WATER SOFTENER IS...

As rain percolates down through soil and rocks it picks up minerals. Water that flows through limestone and chalk picks up calcium and magnesium minerals which are often called hardness.

This water hardness causes scale and scum. Removing these minerals with a water softener produces softened water.

Benefits

- Save money on energy bills
- Eliminate expensive maintenance bills
- Remove traces of scale in the shower, bath or sink
- Give your skin a silky clean feeling
- Make your laundry feel softer and look brighter
- Reduce the high cost of soap and detergents
